FLEET SAFETY STARTS WITH VISIBILITY

Fleet safety and operational control are not optional; they are essential in South Africa's demanding transport sector.

At Track Cam Africa we understand that managing a fleet is about far more than viewing your vehicles on a map. Operational excellence starts with reliable AI and trusted data. When insight drives every decision, businesses don't just operate, they outperform. Paired with live monitoring, you protect your assets, safeguard your drivers, and stay in complete control. Think smarter. Run leaner.

Track Cam Africa provides a fully integrated suite of solutions — real-time tracking, intelligent cameras, AI driver monitoring, and round-the-clock control room support — giving commercial fleets the insight they need to prevent incidents before they happen.

FLEET SAFETY SOLUTIONS

LIVE REAL-TIME AI CAMERA SYSTEMS

For enhanced safety and security, our advanced **AI camera system** continuously monitors driver behaviour and vehicle activity, detecting risks such as fatigue, distraction, cell phone use and tampering. With **real-time connectivity** to our control room, immediate support and intervention are always within reach.

VEHICLE TRACKING

Real-time vehicle tracking from any **smartphone, tablet or computer**.

GEOFENCING AND ROUTE MONITORING

Custom geofences, no-go zones, and off-route deviation alerts give you **complete control** over fleet movement — **cutting unnecessary fuel spend** and reducing operational risk.

STOLEN VEHICLE RECOVERY

Our specialised recovery agents utilise **advanced technology and extensive networks** to recover stolen vehicles.

24/7 CONTROL ROOM

Our **24/7 control room** identifies unsafe driver behavior such as speeding, drowsiness, and mobile phone use. With instant alerts and direct **in-cab communication**, we intervene before risk becomes an incident.

CRASH DETECTION AND PRE-EVENT TELEMATIC DATA

Know exactly what happened and why. Our systems record up to **72 hours of pre-incident data**, offering full transparency for investigations and insurance claims.

FUEL MANAGEMENT SOLUTIONS

Fuel contributes up to 44% of the overall costs of running a fleet. Our fuel management solutions will **prevent siphoning** and manage high fuel consumptions.

Our solutions are powerful, but our relationships are personal. We deliver big-business capability with small-business care. This is what our customers think:

“

*I had two hi-jacking incidences occur on two different company vehicles in the space of three days. **Track Cam Africa** were able to recover both vehicles in record time. They also provided full recovery reports.*

Their service is excellent and professional.

Leon Erwee

“

Track Cam Africa supports our large, company-owned fleet of chemical cargo vehicles with comprehensive live vehicle tracking, in-vehicle cameras, route planning and a dedicated control room. In an industry where risks are high and incidents can rapidly escalate; a state-of-the-art fleet management system is essential to our operations.

Through **Track Cam Africa**, we receive continuous real-time vehicle location updates, speeding alerts, and geo-zone entry notifications, always providing us with full visibility and control of our fleet. We are also directly linked to their 24/7 recovery and response system, offering critical support when it matters most.

Track Cam Africa has proven to be a reliable and trusted partner. Their team is consistently available to support our operations, whether through staff training or prompt resolution of any issues. We have come to rely on their professionalism, responsiveness, and commitment to safety.
